

ALFORDS With Federal Lands in LOUISIANA

[The original version of this was published in AAFA ACTION #64, Spring 2004, Vol. XVI, No. 4, p. 16-22. While that version is static this online version may be updated from time to time.]

Federal Land Offices: There were eight federal land offices in Louisiana. Listed with their BLM land codes, and year opened, they were: St. Helena 01 1819, Greensburg 02 1817 (in St. Helena Parish), New Orleans 03 1811, Natchitoches 04 1838, Ouachita 05 1811, Monroe 06 1821 (in Ouachita Parish), Opelousas 07 1811, and Baton Rouge 08 1844. The Baton Rouge Land Office was the last, closing in 1927.

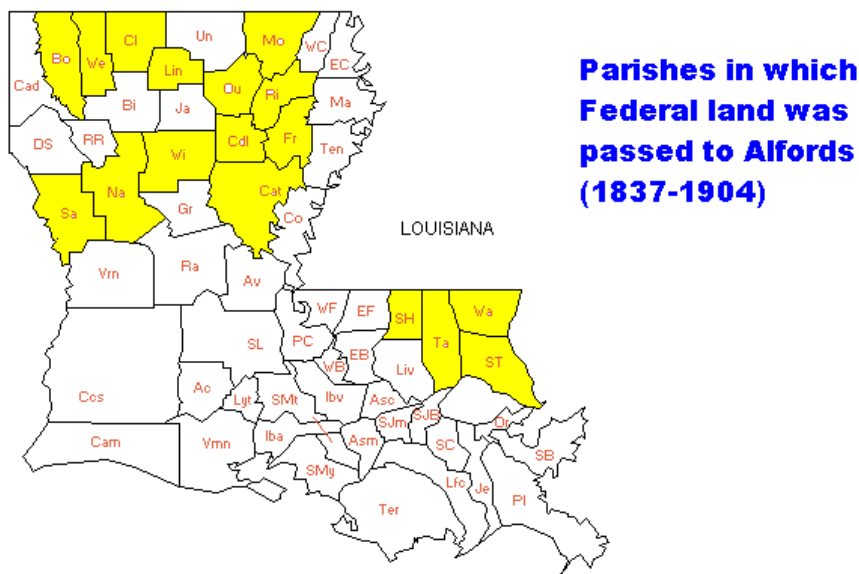

Principal Meridians: Louisiana has two principal meridians from which all federal lands were surveyed. The Louisiana Meridian at longitude 92 degrees 24 minutes 55 seconds, with its base line at latitude 31 degrees 00 minutes 31 seconds, was established in 1807 and governs, primarily, surveys west of the Mississippi River. St. Helena Meridian at longitude 91 degrees 09 minutes 36 seconds, with its baseline at latitude 30 degrees 59 minutes 56 seconds was established in 1819 and governs, primarily, surveys east of the Mississippi River. The swamps and terrain of south Louisiana tend to complicate the surveys,

History and Early Land Records:

There were many land transactions in what we know today as Louisiana long before the beginning or implementation of the federal land or public land program. These are recorded in Spanish or French records. For example Jacob Alford, ancestor of many of us, received a Spanish grant for land in the area that became Washington Parish. Evelyn Fairley compiled Pre-1825 Washington Parish which lists almost 300 of these showing the name, section, township and range. When the federal rectangular survey system was implemented in this area these lands were assigned to sections numbered above 36, the top limit in the rectangular survey system, and superimposed over that system. About 12% of the land in Louisiana was claimed successfully by individuals before the public land could be granted. Our Jacob Alford, in section 54, township 1 south (townships only go south in this area since the baseline is at the northern end of the principal meridian) range 10 E (all surveys in Washington Parish range to the east because the principal meridian is west of Washington Parish.)

Alfords receiving federal lands in Louisiana

The dates of these land deals range from 1837 to 1904 and involve 17 different parishes. Using the map below these 17 Alford land parishes are identified in color, and a map with 1904 parish lines was used. In fact there were no parish line changes made from 1886 to 1908. While the land records show a transaction for Lasalle parish in 1903 it was not actually created until 1910- from Catahoula Parish.

The land transactions listed below were taken from a compact disc (CD) prepared by the Bureau of Land

Management, General Land Office. The same data is available from <http://www.glorerecords.blm.gov/>

The data is arranged alphabetically by the Alford name. Those who have need for a list arranged by parish may obtain one by request from aafa@alfordassociation.org or AAFA POB 1586, Florissant, MO 63031.

At the beginning of each segment of the list there are a couple of lines of reference information as described below. If you plan to dig deeper into any of these and access records from Washington you will need the references.

Accession Number (ACCESSNR) which identifies the state, volume and page where the image may be found. Document Number (DOC NR) the primary identification number given to the original government land office document. A certificate number, warrant number, serial number or patent number may be used as the document number. The land office, meridian and date signed need not explanation.

Following the patentee's name is a land description number, 1, 2, 3, etc. Some land documents contain descriptions of more than one piece of land. In this case, the land descriptions are numbered in sequence as they appear on the document. This number is used to establish sequence and to distinguish each land description on a patent.

Following the number described above comes the aliquot parts, section, township, range and parish. The last entry is total acres. For those documents that have more than one parcel of land described, the total is zero for all land descriptions except for the last one. Aliquot parts such as W1/2NE are not used for tracts less than a quarter of a quarter (40 acres). Instead these small tracts are called lots and usually just given numbers such as 1, 2, 3, etc.

In several cases the land involved spread over parts of Tangipahoa and Washington Parish in which case the parish is shown as TANG/WASH.
